(Closed-system)

Catheter Supplies

Our catheters feature polished eyelets and funnel-shaped ends to ensure comfortable, clean, and secure catheterization. Additional features include DEHP-Free and Latex-Free. Available in male, female, and pediatric lengths.

- **Hydrophilic catheters:** Coated with a hydrophilic polymer that becomes slippery when wet to promote a smooth glide. - Not Lubricated -
- **Closed system catheters:** self-contained- Pre-Lubricated-, which include a collection bag to measure output. A great option for those who often suffer from Urinary Tract Infections.
- **Straight vinyl catheters:** Thin, flexible which have a straight, non-curved tip. -compact option below-

(Two-piece)

Ostomy Supplies

Which pouching system is right for you? Finding the right approach is all about preference. Most ostomy pouch systems are either a 1 or 2 piece; Suncare has both- along with flanges, skin barriers, adhesive removal wipes, protective barrier paste, and more.

(one-piece)

- **One-piece system:** In a one-piece system the pouch and skin barrier are joined permanently together. The pouch collects the waste while the skin barrier sticks around your stoma to protect your skin.
- **Two-piece system:** Unlike a one-piece system, this type of system requires the ostomate to only change the ostomy bag and not the skin barrier wafer. They can then clean the pouch, reattach it,- (Drainable) - or discard the soiled pouch and attach a brand-new one.

Diabetic Testing Supplies

We offer a wide variety of Testing supplies, fully furnished with Test strips, Lancets, and a Lancing Device. Testing strips and Lancets are supplied depending on how many times a day your Physician requires your testing.

Testing frequency guide:

Daily/Testing	Supply/Days	Test Strips
1 X a Day	90 Days	100
2X a Day	90 Days	200
3X a Day	90 Days	300
4X a Day	90 Days	400
